

Upgraded COVID-19 Products Against SARS-CoV-2 Omicron Variant

Category COVID-19	Immunofluorescence Microfluidics	Chromatography Immunoassay
COVID-19 Ag		
COVID-19 NAb		
COVID-19 IgG/IgM		

UPGRADED COVID-19 PRODUCTS :

Immunofluorescence

- * COVID-19 Antigen Microfluidic Chip
- * COVID-19 Neutralizing Antibody Microfluidic Chip
- * COVID-19 IgG/IgM Microfluidic Chip

Lateral Flow

- * COVID-19 Antigen Rapid Test Cassette
- * COVID-19 Neutralizing Antibody Rapid Test Cassette
- * COVID-19 IgG/IgM Rapid Test Cassette

Key Points of Product Upgrading for *Omicron Variant* (B1.1.529)

Category COVID-19	Immunofluorescence (Microfluidic Chip)	Lateral Flow (Collidal Gold)
COVID-19 Ag	<p>Upgraded COVID-19 Ag Test for <i>Omicron Variant</i> : Additional pairing antibodies (precoated, labeled) with strong recognition ability and high specificity to SARS-CoV-2 <i>Omicron Variant Strain</i> are supplemented, for the effective identification and detection of the <i>Omicron Variant</i>. It will reduce the false negative rate effectively to guarantee the identification ability and sensitivity of the test.</p>	
COVID-19 NAb	<p>Upgraded COVID-19 NAb Test for <i>Omicron Variant</i> : Additional spike protein with strong recognition ability and high specificity to SARS-CoV-2 <i>Omicron Variant Strain</i> is supplemented. It will effectively detect whether there is neutralizing antibody against <i>Omicron Variant</i> and (for Immunofluorescence Microfluidics) evaluate the efficacy of the neutralizing ability .</p>	
COVID-19 IgG/IgM	<p>Upgraded COVID-19 IgG/IgM Test for <i>Omicron Variant</i> : Additional antibodies (labeled) with strong recognition ability and high specificity to SARS-CoV-2 <i>Omicron Variant Strain</i> are supplemented. It will reduce the false negative rate effectively to guarantee the identification ability and sensitivity of the test.</p>	

* **More Sensitive**

* **More Specific**

* **More Accurate**

In the diagnosis and differentiation of SARS-CoV-2 *Variant Omicron* (B1.1.529)
